The Future of Autonomous Cars

The Future of Autonomous Cars is a strategy report from Berg Insight analysing the latest developments on the self-driving car market worldwide.

This strategic research report from Berg Insight provides you with 250 pages of unique business intelligence including 5-year industry forecasts and expert commentary on which to base your business decisions.

Highlights from this report:

- **Insights** from numerous executive interviews with market leading companies.
- **New data** on car populations and new car registrations worldwide.
- **Comprehensive overview** of the autonomous car value chain and key applications.
- **In-depth analysis** of market trends and key developments.
- **Updated profiles** of 14 major car OEMs and their autonomous car activities.
- **Detailed view** on the involvement of IT and technology companies in this industry.
- **Market forecasts** by region lasting until 2030.
Ever since the introduction of the first automobile one thing has remained constant despite the evolution of performance and appearance – cars have always had a driver. The concept of driverless vehicles opens up for new potential applications as well as business models. In fact, the removal of the driver is arguably the most significant and transformative innovation ever faced by the automotive industry. Some of the potential benefits that follow are safer, more efficient and more convenient journeys. Self-driving cars open up completely new ways to deal with transportation – fleets of autonomous cars could in the future handle entire cities’ need for personal mobility with much fewer vehicles than are used today. SAE International has developed a six level standard (0–5), where semi-autonomous functionality starts in the second level. The third level is the first to provide some actual autonomy in the sense that the driver can divert attention from the road although he or she must be able to regain control of the vehicle with some seconds of prior warning. The fourth level provides full autonomy in specific use cases of various complexity.

In 2015, the first semi-autonomous (SAE Level 2) car models were introduced on the market and reached sales of an estimated 194,000 cars. This number is forecasted to increase by almost 57 percent to reach new registrations of about 304,000 Level 2 capable vehicles in 2016. By 2030 an estimated 43 million cars will be sold featuring Level 2 capability and the active installed base will have reached about 177 million cars.

The total number of new registrations of autonomous (SAE Level 3 and 4) cars is forecasted to grow at a compound annual growth rate (CAGR) of 62 percent from 0.2 million units in 2020 to reach 24 million units in 2030. The active installed base of autonomous cars is forecasted to have reached about 71 million at the end of the forecast period. SAE Level 3 and 4 cars will constitute about 16.5 million and 7.8 million of the cars sold in 2030. However, Level 4 sales are expected to overtake Level 3 in the years following 2030. Cars with Level 5 capability are not expected to emerge before 2030 and potentially much later.

There are two approaches to the development of autonomous cars – the evolutionary and the revolutionary. Most of the incumbent car manufacturers are pursuing an evolutionary approach which relies on step-by-step developments. The first step for the evolutionary pathway is to make Level 3 cars available in 2020. This initial system is likely to only feature autonomous mode on freeways. By 2022, the evolutionary approach is expected to reach the next milestone with the rollout of Level 4 capable cars. These cars will be able to drive completely autonomously without ever requesting the driver to intervene but initially only on specific freeways and thus the driver will have to take over control when the car is exiting the freeway. Most of the new entrants like the IT companies as well as startups are instead targeting a revolutionary approach. The revolutionary approach argues that Level 3 is unsafe due to the repeating control exchange between driver and vehicle and therefore aims directly for Level 4 focusing on city-based low-speed autonomous cars. These cars are expected to be introduced in 2022. However, the initial revolutionary Level 4 cars will only be available in specific environments such as in downtown shopping areas.

Most carmakers are today developing autonomous car technology and they are joined by software companies, Tier-1 suppliers, government initiatives and startup firms. The diversity of the actors is important since a range of various technological advancements are necessary along with regulatory changes to realize self-driving cars. Fully autonomous cars are closely related to artificial intelligence and this is therefore one of the most researched fields among carmakers and other institutions working on self-driving vehicle projects. Recent progress in the field of artificial intelligence and specifically in deep learning has made the development of autonomous cars seem more likely to occur soon.

It is important to recognize that autonomous cars will not arrive overnight. Even when a ready solution is available and regulations have been adapted to it, the roll out of self-driving vehicles to the broad market will take many years. The luxury car market will be the first segment to offer autonomous car technologies. This trend can already be seen with automakers like Tesla, BMW and Mercedes-Benz offering autopilot features in their cars. These features, however, are not truly autonomous yet since they require the driver to stay attentive at all times. Moreover, the automakers are starting to see competition from new entrants like Google, Uber and Baidu which all aim to develop self-driving cars.

This report answers the following questions:

- What is the current status of the autonomous car industry?
- Which are the main actors targeting the autonomous car market?
- How will regulatory developments affect the autonomous car market?
- Which are the main drivers and barriers on this market?
- How will autonomous cars impact business models and which are the key benefits?
- How are IT and tech companies positioning themselves in the autonomous car value chain?
- What semi-autonomous cars are available on a commercial basis today?
- What are the automotive OEMs future plans for driverless cars?
- How will the market evolve in Europe, North America, Latin America, Asia-Pacific and MEA?
Executive summary

1 Introduction to autonomous cars
1.1 Definitions and classifications
1.2 Brief history of autonomous cars
1.3 Current state of self-driving cars and key stakeholders
1.3.1 Automotive manufacturers
1.3.2 Tier-1 automotive suppliers
1.3.3 Technology companies
1.3.4 Connectivity service providers
1.4 Key market drivers
1.5 Key market barriers
1.6 The global passenger car market
1.6.1 Car segments
1.6.2 Passenger cars in use by region
1.6.3 New passenger car registration trends
1.7 Market trends
1.7.1 Hybrid electric, plug-in hybrid electric and all-electric vehicles
1.7.2 Car sharing and personal transportation as a service
1.8 User segments for autonomous driving
1.8.1 Luxury segment
1.8.2 Commuters
1.8.3 Young drivers
1.8.4 Paratransit
1.8.5 Delivery fleets
1.8.6 Transportation on demand

2 Advanced driver assistance systems
2.1 Introduction to the most common ADAS
2.1.1 Adaptive cruise control
2.1.2 Cooperative adaptive cruise control
2.1.3 Lane departure warning
2.1.4 Lane keeping assist
2.1.5 Autonomous emergency braking
2.1.6 Collision avoidance system
2.1.7 Blind spot monitor
2.1.8 Rear cross traffic alert
2.1.9 Forward cross traffic alert
2.1.10 Turning assist
2.1.11 Road sign detection
2.1.12 Other ADAS
2.2 Specific semi-autonomous use cases
2.2.1 Parking assist
2.2.2 Traffic jam assist and highway autopilot
2.2.3 Platooning

3 Autonomous car technologies
3.1 Sensors
3.1.1 Cameras
3.1.2 Lidar
3.1.3 Radar
3.1.4 Ultrasonic and infrared sensors
3.1.5 Inertial navigation system
3.2 Telematics
3.2.1 Mobile connectivity
3.2.2 Location tracking
3.2.3 Digital maps
3.2.4 V2V and V2I communication
3.3 Computing platform
3.3.1 Sensor fusion
3.3.2 Interpretation and decision making
3.3.3 Computer vision
3.3.4 Artificial intelligence
3.3.5 Machine learning
3.3.6 Deep learning
3.4 Execution and related technologies
3.4.1 Electronic control unit
3.4.2 Human machine interface
3.4.3 Driver monitoring systems
3.5 Summary of the current state of autonomous car technologies

4 Autonomous car initiatives
4.1 Overview of current projects
4.2 Jaguar Land Rover Automotive
4.3 Volvo Car Group
4.4 Tesla Motors
4.5 Mercedes-Benz
4.6 Audi
4.7 BMW
4.8 General Motors
4.9 Ford Motor Company
4.10 Toyota Motor Corporation
4.11 Honda Motor Company
4.12 Hyundai Motor Group
4.13 Renault-Nissan Alliance
4.14 Fiat Chrysler Automobiles
4.15 Groupe PSA
4.16 Google
4.17 Apple
4.18 Uber Technologies
4.19 Baidu
4.20 Additional car OEM initiatives
4.21 Car manufacturers not yet betting on autonomous car technology
4.22 Supplier and technology company initiatives
4.22.1 Autoliv
4.22.2 Bosch
4.22.3 Continental
4.22.4 Delphi Automotive
4.22.5 ZF TRW
4.22.6 Mobileye
4.22.7 Nvidia
4.22.8 Velodyne LiDAR
4.22.9 Additional supplier initiatives

5 Regional developments
5.1 USA
5.2 European Union
5.3 Germany
5.4 United Kingdom
5.5 Sweden
5.6 China
5.7 Japan
5.8 South Korea
5.9 Singapore

6 Benefits of autonomous cars
6.1 Safety
6.2 Convenience
6.3 Traffic efficiency
6.4 Mobility
6.4.1 Benefits for people unable to drive
6.4.2 Public driverless fleets of cars
6.5 Sustainability
6.5.1 Electric autonomous vehicles
6.5.2 Increased efficiency
6.6 Impact on city infrastructure

7 Barriers and challenges
7.1 Technology reliability
7.2 Mixed vehicle environment
7.3 HMI challenges to accomplish Level 3
7.4 Standards and collaborations
7.5 Regulations and liabilities
7.5.1 International conventions on road traffic
7.5.2 Liability
7.6 Public acceptance
7.7 Car longevity

8 Market forecasts and trends
8.1 Car sales forecast
8.2 Autonomous car sales forecast
8.2.1 SAE Level 1
8.2.2 SAE Level 2
8.2.3 SAE Level 3
8.2.4 SAE Level 4
8.2.5 SAE Level 5
8.3 Regional market developments
8.3.1 SAE Level 2, Level 3 and non-driverless Level 4
8.3.2 SAE Driverless Level 4
8.4 Market drivers and barriers
8.4.1 Competitive environment
8.4.2 Technology environment
8.4.3 Regulatory environment
8.4.4 Macroeconomic environment
8.5 Value chain analysis
8.5.1 Automotive industry players
8.5.2 IT industry players
8.5.3 Automotive suppliers
8.5.4 Transport service players
8.6 Future industry trends
8.6.1 Forecasting the autonomous car market beyond 2030
8.6.2 The overall impact of autonomous cars on society
8.6.3 Data ownership and privacy protection strategies
8.6.4 How will the rollout of self-driving cars affect the insurance industry?
8.6.5 Self-driving cars and the Internet of Things
8.6.6 New mobility services and business models for fully autonomous cars

Glossary
**About the Authors**

**Ludvig Barrehag** is an M2M/IoT Analyst with a Master’s degree in Management and Economics of Innovation from Chalmers University of Technology. His areas of expertise include autonomous cars and related markets and technologies.

**Johan Fagerberg** is co-founder and an experienced analyst with a Masters degree in Electrical Engineering from Chalmers University of Technology. His areas of expertise include location-based services and wireless M2M/IoT markets, with a special focus on fleet management and car telematics.

**Berg Insight** offers premier business intelligence to the telecom industry. We produce concise reports providing key facts and strategic insights about pivotal developments in our focus areas. Berg Insight also offers detailed market forecast databases and advisory services. Our vision is to be the most valuable source of intelligence for our customers.

### Who should buy this report?

**The Future of Autonomous cars** is the foremost source of information about the emerging self-driving car market. Whether you are a car manufacturer, first tier supplier, telematics service provider, telecom operator, content provider, investor, consultant, or government agency, you will gain valuable insights from our in-depth research.
