

Digital Signage M2M and IoT Applications

Digital Signage M2M and IoT Applications is a comprehensive report from Berg Insight analysing the latest developments on the global digital signage market.

This strategic research report from Berg Insight provides you with 50 pages of unique business intelligence including 5-year industry forecasts and expert commentary on which to base your business decisions.

Highlights from the first edition of the report:

- ◆ **Detailed** analysis of the digital signage industry.
- ◆ **Summary** of the latest industry trends and developments.
- ◆ **Updated** in-depth profiles of key players in the digital signage markets.
- ◆ **Reviews** of vendor strategies and competitive dynamics.
- ◆ **Perspectives** on the impact of new technological advancements.
- ◆ **Extensive** global and regional market forecasts lasting until 2019.

The number of connected digital signage displays will reach 63.8 million in 2019

Digital signage is an ambiguous term used in reference to a wide range of solutions for presenting media and information on display screens. There is no universally accepted definition on what the term encompasses, but it generally includes a broad range of solutions as diverse as traffic signs, menu boards and in-flight entertainment displays. Berg Insight's definition is a system that comprises a connected display screen, a media player and a content management system that are managed over a local network or remotely. Systems that require manual intervention, such as swapping a SD card in the media player to load new content, are left outside of the scope of this report.

The first connected digital signage solutions were commercially launched nearly three decades ago. Since then, digital signage solutions have found their way into nearly every possible vertical market and a wide variety of application areas. The untapped market potential is nevertheless still vast and growth is showing no signs of slowing down. Berg Insight forecasts that global shipments of display screens for digital signage will grow from 7.3 million units in 2014 at a compound annual growth rate (CAGR) of 18.7 percent to reach 17.2 million units by 2019. The number of digital signage

displays in active use will at the same time grow at a CAGR of 20.2 percent during the next five years from 25.4 million units in 2014 to 63.8 million units in 2019.

Leading providers of digital signage solutions include media player vendors such as AOPEN, BrightSign and IAdea; CMS software providers such as Scala, RMG Networks and Four Winds Interactive; and display manufacturers such as Samsung, LG and NEC. Despite many well-known vendors active in the market, most parts of the value chain are highly fragmented where thousands of companies compete worldwide. The most recent behemoth to enter the market is Google, with the aim of making Chrome OS one of the main platforms for digital signage. Berg Insight anticipates that this will accelerate market development and increase the legitimacy of digital signage as a central platform for digital marketing, especially in areas such as targeted delivery of content with the help of location-based technology and analytics.

Berg Insight's M2M Research Series

What are the key business opportunities in the emerging wireless M2M/IoT market? Berg Insight's M2M Research Series is a unique series of 25 market reports published on a regular basis. Each title offers detailed analysis of a specific vertical application area such as smart metering, fleet management or vehicle telematics. Once per year we also publish summaries of our research with detailed forecasts for the Global and European wireless M2M markets, respectively.

This report answers the following questions:

- ◆ How many connected digital signs are there worldwide?
- ◆ What is the potential market size for digital signage solutions?
- ◆ Which trends and developments are shaping the market?
- ◆ Who are the leading digital signage display, CMS and media player vendors?
- ◆ How is the competitive landscape evolving?
- ◆ How are technological advancements affecting the industry?

Installed base of digital signage displays (World 2013-2019)

Berg Insight offers premier business intelligence to the telecom industry. We produce concise reports providing key facts and strategic insights about pivotal developments in our focus areas. Berg Insight also offers detailed market forecast databases and advisory services. Our vision is to be the most valuable source of intelligence for our customers.
