Public Transport ITS in Europe and North America is the fifth consecutive report from Berg Insight analysing the latest developments on the intelligent transportation systems market for public transport in these two regions.

This strategic research report from Berg Insight provides you with 240 pages of unique business intelligence, including 5-year industry forecasts, expert commentary and real-life case studies on which to base your business decisions.

**Highlights from this report:**

- **Insights** from 30 new executive interviews with market leading companies.
- **New data** on vehicle fleets and public transport utilisation in Europe and North America.
- **Comprehensive description** of the public transport ITS value chain and key applications.
- **In-depth analysis** of market trends and key developments.
- **Profiles** of 66 aftermarket ITS solution providers.
- **Summary** of OEM propositions from public transport vehicle brands.
- **Revised market forecasts** lasting until 2020.

**Berg Insight’s M2M Research Series**

What are the key business opportunities in the emerging wireless M2M/IoT market? Berg Insight’s M2M Research Series is a unique series of 25 market reports published on a regular basis. Each title offers detailed analysis of a specific vertical application area such as smart metering, fleet management or vehicle telematics. Once per year we also publish summaries of our research with detailed forecasts for the Global and European wireless M2M markets, respectively.

Public transport ITS is a key element to enable sustainable smart mobility

The term Intelligent Transport Systems (ITS) refers to information and communication technology applied to transport infrastructure and vehicles. Berg Insight’s definition of ITS for public transport includes systems installed in public transport vehicles as well as at terminals, stops, depots, and similar. Included are also backoffice IT systems which ensure that public transport services can be planned, scheduled, and managed to achieve efficient operations. An important part of ITS for public transport is further solutions providing travellers with updated information about routes, departure times, possible disturbances and connecting services. The history of these different types of solutions dates back several decades and current state-of-the-art solutions include for example real-time intermodal journey planners, open automated fare collection systems using contactless cards or mobile ticketing, and on-board infotainment solutions with information about nearby points of interest.

Public transport plays an increasingly important role in societies as a result of continuing population growth in cities and shifting consumer preferences. With ridership growing steadily across markets worldwide, a total of 57.6 billion and 13.8 billion public transport passenger journeys were carried out in the EU28 and North America respectively in 2014. Available modes include for example local and regional buses and trolleybuses, regional and suburban rail transport, metros and trams, and local waterborne passenger transport services. In 2014, the number of registered buses and coaches in Europe and North America reached 764,000 vehicles and 439,000 vehicles respectively, not including school buses. The economic value of public transport services in Europe is estimated to around €150–200 billion per year, while the corresponding number in North America is around €60–70 billion.

Berg Insight is of the opinion that the market for ITS in public transport is in a growth phase which will last for several years to come. Increased funds made available to infrastructure spending and demands from travellers contribute to a positive market situation. Individual markets may however experience temporary fluctuations, depending on the political climate, austerity measures and local developments. The total market value of public transport ITS for buses and trams in Europe is forecasted to grow at a compound annual growth rate (CAGR) of 7.2 percent from €0.59 billion in 2015 to reach €0.87 billion in 2020 and the penetration rate is estimated to increase from 76.4 percent in 2015 to 88.5 percent in 2020.

A group of international aftermarket solution providers have emerged as leaders on the market for public transport ITS. Major providers across Europe and North America include Canada-based Trapeze Group and Germany-based INIT with significant installed bases in both regions. IVU is furthermore a dominant player primarily in the German-speaking part of Europe and has also expanded in the North America. Clever Devices and Xerox hold leading positions on the North American public transport ITS market, and the latter is also an international provider of fare collection systems. Additional companies with major market shares in North America include RouteMatch, Avail Technologies and Cubic-owned NextBus. Examples of companies with major market shares on national markets in Europe include Ineo Systrans which holds a leading position in France, and Vix which is a major provider on the UK market. Other significant players include the Spanish groups Indra, GMV and Grupo Etra, Swarco’s subsidiary Swarco Mizar in Italy, Atron in Germany, Italy-based PluService, the Norwegian provider FARA and the Austria-based company Kapsch CarrierCom. Volvo Group is moreover a notable player from the vehicle OEM segment, offering the ITS4mobility system in partnership with Consat Telematics in Europe and North America. Scania, Daimler, New Flyer and Iveco offer some conventional OEM telematics features for their buses.

The outlook for the public transport ITS market is positive, as several major developments encourage increased investments in such technologies. The ITS market is likely positively affected by international public transport-related initiatives such as the EU project EBSF_2 as well as APTA’s standards programs for public transport vehicles and ITS. Recent focus of ITS system deployments has been on increasing the level of integration and utilising technology advancements for fare collection purposes. Another major driver is the ongoing global developments related to the concept of smart cities, where ITS in general and public transport ITS in particular constitute key elements to enable sustainable smart mobility.

This report answers the following questions:

- How is public transport organised and managed?
- What is the geographical structure of public transport fleets in Europe and North America?
- Which are the leading international and regional providers of aftermarket public transport ITS solutions?
- What offerings are available from vehicle OEMs?
- What impact will the launch of standard factory installed on-board computers from the OEMs have on the market?
- Which drivers and barriers are affecting the market for public transport ITS solutions?
- How are the regulatory developments in Europe and North America affecting the public transport ITS industry?
- How will the public transport ITS industry evolve in the future?
Table of Contents

Executive summary

1 Public transport in Europe and North America
1.1 Modal split of passenger transport
1.2 Bus fleets and public transport utilisation
1.3 Market shares for bus and coach OEMs
1.4 Rail-borne public transport modes
1.4.1 Trams and light rail
1.4.2 Metro
1.5 Organisation and contracting in public transport
1.5.1 Legal framework in Europe
1.5.2 Legal framework in North America
1.5.3 Organisational forms and regional differences
1.6 Major public transport operators

2 ITS technologies and solutions
2.1 Public transport ITS infrastructure
2.1.1 Vehicle segment
2.1.2 Roadside segment
2.1.3 Backoffice segment
2.1.4 Traveller segment
2.1.5 GNSS segment
2.1.6 Network segment
2.2 Public transport management
2.2.1 Planning and scheduling tools
2.2.2 Computer aided dispatch systems
2.2.3 Traffic signal priority
2.2.4 Depot management
2.3 Traveller management
2.3.1 Passenger information
2.3.2 Entertainment
2.3.3 Fare payment
2.4 Driver management
2.4.1 Driving data registration and analysis
2.4.2 Eco-driving schemes
2.4.3 Video-based driver monitoring
2.4.4 Insurance risk management
2.5 Vehicle management
2.5.1 Vehicle diagnostics and maintenance planning
2.5.2 On-board security solutions
2.6 Business models and strategies

3 Market forecasts and trends
3.1 Market analysis
3.1.1 Market value forecast
3.1.2 Regional markets
3.1.3 Major vendors
3.2 Market drivers and barriers
3.2.1 Macroeconomic environment
3.2.2 Regulatory environment
3.2.3 Competitive environment
3.2.4 Technology environment
3.3 Value chain analysis
3.3.1 ITS and telematics industry players
3.3.2 Automotive industry players
3.3.3 Telecom industry players
3.3.4 IT industry players
3.4 Future industry trends
3.4.1 ITS adoption to grow alongside general IT maturity
3.4.2 Factory-fitted gateways and third-party systems to coexist
3.4.3 Future public transport services must transform to be competitive with cars
3.4.4 Shared mobility and public transport ecosystems to converge
3.4.5 Mobile devices assume multiple important roles in the ITS infrastructure
3.4.6 Public transport stakeholders invest in autonomous vehicles

4 OEM products and strategies
4.1 Daimler
4.2 Iveco
4.3 MAN Truck & Bus
4.4 Scania
4.5 Volvo Group
4.6 New Flyer
4.7 Gillig
4.8 Alexander Dennis
4.9 VDL
4.10 Van Hool

5 Aftermarket solution providers
5.1 International
5.1.1 GIRO
5.1.2 INIT
5.1.3 IVU
5.1.4 Kapsch CarrierCom
5.1.5 Thales
5.1.6 Trapeze Group
5.1.7 Xerox
5.2 Germany and Eastern Europe
5.2.1 Atron
5.2.2 i-Cell
5.2.3 ICOM
5.2.4 DILAX Group
5.2.5 HaCon
5.2.6 METRIC
5.2.7 Nettropolis
5.2.8 PSI Transcom
5.2.9 R&G
5.2.10 Radcom
5.2.11 Scheidt & Bachmann
5.2.12 Siemens
5.2.13 UTI
5.3 France, Benelux and the UK
5.3.1 21st Century Technology
5.3.2 Actia
5.3.3 Comatis
5.3.4 GreenRoad
5.3.5 Hanover Displays
5.3.6 Ineo Systrans
5.3.7 Lumiplan
5.3.8 Maestronic
5.3.9 Masabi
5.3.10 MIX Telematics
5.3.11 Navocap (Ioo)
5.3.12 Omnibus
5.3.13 Sabatier Geolocalisation
5.3.14 Vix Technology
5.4 The Mediterranean
5.4.1 GMV
5.4.2 Goal Systems
5.4.3 GRUPO ETRA
5.4.4 Indra
5.4.5 Link Technologies
5.4.6 Metatronix and Digigroup Informatica
5.4.7 PlusService
5.4.8 Selex ES
5.4.9 Swarco
5.4.10 Tecnic
5.4.11 The Nordics
5.5.1 Conset
5.5.2 FARA
5.5.3 Fältcom
5.5.4 Hogia
5.5.5 Icomera
5.5.6 Piilotfish
5.5.7 Thoreb
5.5.8 Trafflog Nordic
5.5.9 TriNorth Solutions
5.5.10 Trivector
5.5.11 Vehco
5.6 North America
5.6.1 Accenture
5.6.2 Avail Technologies
5.6.3 Bytemark
5.6.4 Clever Devices
5.6.5 Cubic Transportation Systems
5.6.6 Ecotope
5.6.7 ISR Transit
5.6.8 Luminator Technology Group
5.6.9 RouteMatch
5.6.10 TransLoc
5.6.11 Zonar

Glossary
You can place your order in the following alternative ways:

1. Place your order online in our web shop at www.berginsight.com
2. Fax this order sheet to us at fax number: +46 31 711 30 96
3. Mail this order sheet to us at: Berg Insight AB, Viktoriagatan 3, 411 25 Gothenburg, Sweden
4. Email your order to: info@berginsight.com
5. Phone us at +46 31 711 30 91

VAT is chargeable on all orders from Sweden. Orders from all other countries in the European Union must include the buyer’s VAT Registration number below in order to avoid the addition of VAT.

Please charge my credit card

- VISA
- Mastercard

Card number_________________________ Expiry date (MM/YY)______ CV code

Cardholder’s name_________________________ Signature

Billing address
